Active Principles

See the table in which formulation are them possible.

Bamboo. The bamboo is a spontaneous plant that allows a better bony resistance and a better absorption of the calcium thanks to its principle active, the silica. Thanks to the wealth of mineral it has a positive action on fingernails and hair and it helps the healing of wounds and ulcers.

Panthenol. It constitutes one of the most stable forms of pantothenic acid (or vitamin B5), it has a moisturizing and lenitive action. It favours in fact a better cutaneous moisture, penetrating in the deepest layers of the skin and fixing in it the water. Moreover it favours the metabolism of the cutaneous cells stimulating the healing process and the renewal of the skin.

Vaseline oil. This fluid mineral oil is very used as covering agent because it gives a sense of smoothness. It is one of the most effective emollients and one of the safest cosmetic ingredients because it doesn't contain toxic elements and germs. It doesn't obstruct the pore.

Almond oil. It is known and appreciated for its sweetening emollients, nourishing and lenitive properties and to be also well tolerate by the most sensitive skins. It is rich of vitamins E, B, proteins and minerals and so it is useful to contrast the skin aging.

Vitamin E. It improves the conditions of the cutaneous surface because it maintains the correct hydration. It has an anti-inflammatory action and it defends the skin from aging. It has an anti-oxidant function for free radicals of the skin.

Jjoba Oil. It has disinfectant and anti-fungal properties. It has some good curative and protective qualities and it is a good moisturizer of the skin. It penetrates in the skin leaving it as silk. This oil contains Vitamin E, minerals and natural elements.

REMOVER Acetone Free

Blackcurrant oil. Its oily formulation allows to have a correct balancing of fat acids Omega 3 and Omega 6. Thanks to this composition it has an anti-inflammatory and anti-allergic action. Moreover it acts as natural strengthener and hardener for the nails.

Argan Oil. This oil is used for its soothing, hydrating and strongly elasticizing properties. Stimulating the cell renewal, it has excellent antioxidant properties and it is frequently used in anti-age cosmetic products. The Argan Oil stimulates the intracellular oxygenation and it protects the connective tissues. Its application restores the hydro-lipidic skin layer and it increases the nourishment of the cells.

Vitamin A. It prevents, avoids and retards skin aging phenomena. It has a skin protection function. It's particularly indicated in winter because it induces an epidermal thickening.

Trace Elements. Complex of Trace elements, in form of Salts of Pyrrolidone Carboxylic Acid (PCA), among which Zinc and Copper. The trace elements are a product ideal for cosmetic treatments in fact it's a coadjuvant of hydration, elasticity, remineralisation of the skin, regulation of the sebum, cellular revitalization and respiration. The Copper and the Zinc contained in the trace elements contribute to hold under control the electric field of the fundamental layer of the derma optimizing the enzymatic mechanisms and intercellular exchange.
